

U.S. DEPARTMENT OF  
**ENERGY**

Energy Efficiency &  
Renewable Energy

# Biomass R&D TAC

# EERE Planning Drivers

- President's Climate Action Plan (CAP)
- 2014–2018 DOE Strategic Plan
- Quadrennial Energy Review (QER)
- Quadrennial Technology Review (QTR)

# EERE Strategic Plan Structure

# EERE Vision

A strong and prosperous America, powered by clean, affordable, and secure energy

# EERE Mission

To create  
and sustain  
American  
leadership in  
the transition  
to a global  
clean energy  
economy

# EERE Organizational Principles

- Economic Prosperity
- Affordability
- Reduced Environmental Impact
- Energy Security
- Consumer Choice

# EERE Five Core Questions

- **Impact**

*Is this a high-impact problem?*

- **Additionality**

*Will EERE funding make a large difference relative to existing funding from other sources, including the private sector?*

- **Openness**

*Are we focusing on the broad problem we are trying to solve and open to new ideas, approaches, and performers?*

- **Enduring Economic Impact**

*How will EERE funding result in enduring economic impact for the United States?*

- **Proper Role of Government**

*Why is this investment a necessary, proper, and unique role of government rather than something best left to the private sector?*

# EERE Strategic Plan Goals

## **Strategic Goals**

Transportation  
Renewable Power  
Energy Efficiency  
Clean Energy Manufacturing  
Grid Modernization  
Federal Sustainability  
High-Performing Culture

# Goal 1: Sustainable Transportation

Accelerate the development and adoption of sustainable transportation technologies

# Example Strategies: Sustainable Transportation

## Cost Reduction and Performance Improvement

- Develop Technologies That Enable the Cost-Effective Production of Electric-Drive Vehicles

## Technology Validation and Risk Reduction

- Support Pilot and Demonstration Facilities for Alternative Fuel Production

## Reducing Market Barriers

- Support Pioneering Deployments of Market-Ready Vehicles and Alternative Fuels in Key Early Markets

# Goal 1: Sustainable Transportation

## Success Indicators

1. By 2020, through improvements in engine efficiency, increase the fuel economy of gasoline and diesel light-duty vehicles by 35% and 50%, respectively
2. By 2022, develop materials that enable a cost-effective 30% weight reduction for light-duty vehicles
3. By 2022, develop a battery pack demonstrating a modeled cost of \$125/kWh and an electric drive system demonstrating a modeled cost of \$8/kW and efficiency greater than 94%
4. By 2017, demonstrate a 50% improvement in long-haul truck freight efficiency
5. By 2017, validate at pilot scale at least one technology pathway for hydrocarbon biofuel production demonstrating a mature modeled cost of \$3/gge with GHG emissions reduction of 50% or more
6. By 2022, validate at pilot or demonstration scale two additional pathways for hydrocarbon biofuel production at a modeled cost of \$3/gge with GHG emissions reduction of 50% or more
7. By 2020, develop and demonstrate a fuel cell system for light-duty vehicles achieving 150,000-mile durability and a modeled cost of \$40/kW
8. By 2020, reduce the modeled cost of hydrogen production from renewable resources to less than \$4/gge

**Strategic Goal:** Accelerate the development and adoption of sustainable transportation technologies

# Sustainable TRANSPORTATION

Office of Energy Efficiency and Renewable Energy  
U.S. Department of Energy

## Sector Priorities:

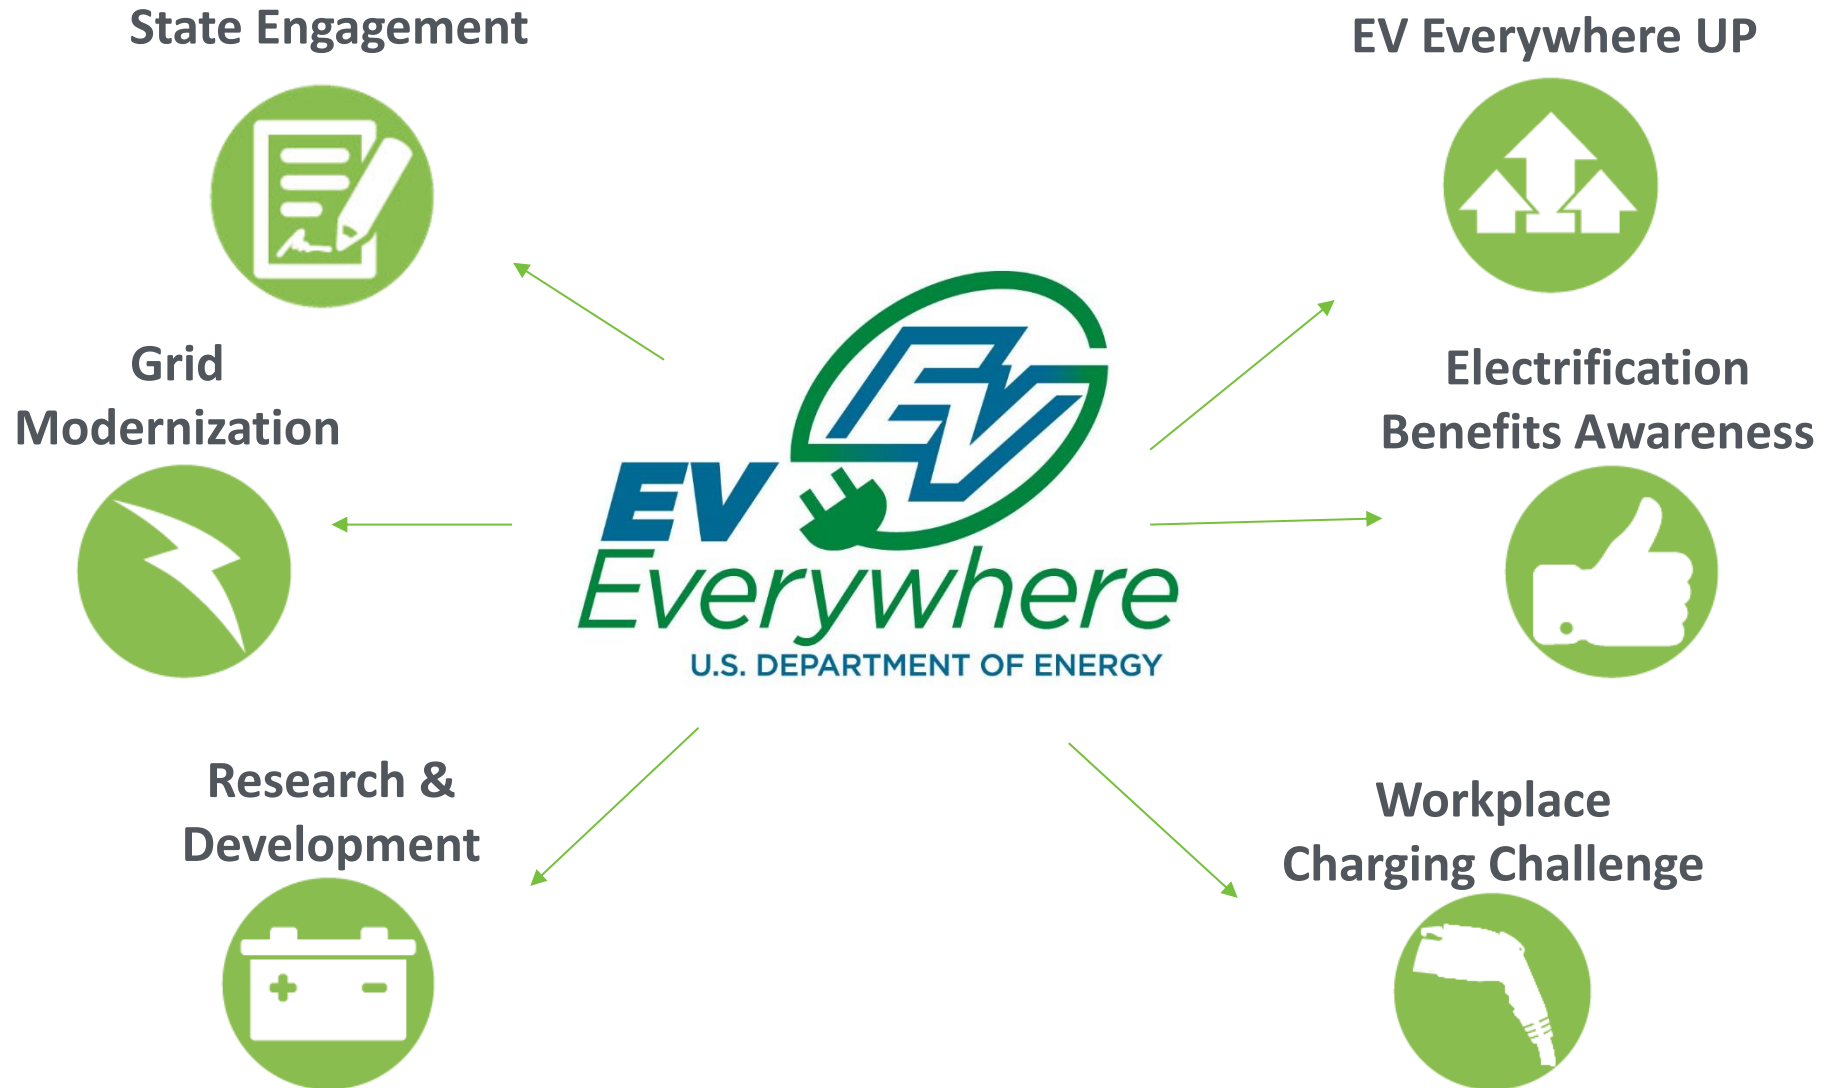

1. Strategic Whitespace for Crosscutting RD3
2. New, Emerging Areas (Off-Roadmap Ideas, Mega-Trends)
3. Innovative Platforms to Compress RD3 Cycle

# Transportation Sector Dashboard

- Key sector priorities
  - EV Everywhere
  - SuperTruck II
  - Optima
  - H2USA
  - Transportation as a System
  - Energy Materials Network
  - Synthetic Biology
  - Integrated Biorefineries (Pilot, Demo)
  - Bioeconomy
  - Clean Cities

# EV Everywhere Grand Challenge

*Affordable plug-in electric vehicles by 2022*

# EV Everywhere Technology Targets

## Vehicle Weight Reduction

Reduce vehicle weight by nearly 30%

*(Includes body, chassis, interior, electric drive components, and compounding weight reductions)*

## Electric Drive System

Reduce cost from \$30/kW in 2012 to \$8/kW

*(1.4 kW/kg, 4 kW/L, 94% efficiency)*

## Battery

Reduce cost from \$500/kWh in 2012 to \$125/kWh

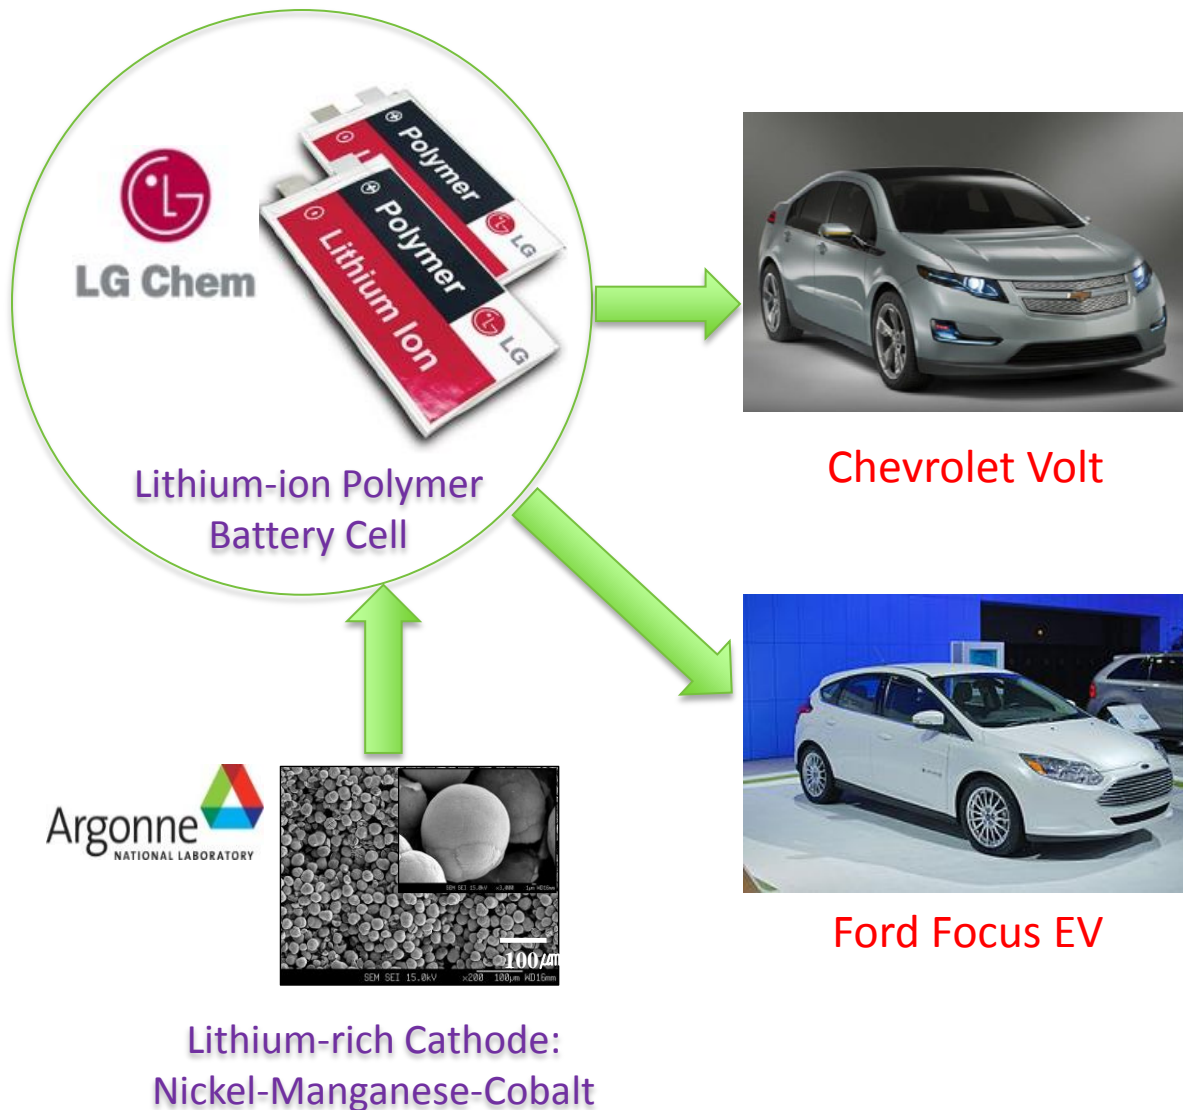

*(250 Wh/kg, 400 Wh/L, 2 kW/kg)*

***DOE has invested more than \$300M in RD&D; more than 400,000 PEVs sold***

# Battery Technology Highlights

## Lithium-ion Battery Technology for Plug-in Electric Vehicles

- EERE VTO supported the development of the core cell technology that is currently used in the Chevrolet Volt PEV battery and the Ford Focus EV battery.
- The cell, which contains a graphitic anode and a mixture of Nickel-Manganese-Cobalt and Manganese spinel oxides, was developed in collaboration with LG Chem Michigan from early 2004 through 2012.
- The Nickel-Manganese-Cobalt cathode in the LG Chem cell was developed at Argonne National Laboratory with support from EERE VTO from 2002-2010.

# SuperTruck I

## Cummins and Daimler

Achieved 50% engine efficiency; exceeded freight efficiency goal.

Cummins/Peterbilt  
**70% improvement**

Daimler Trucks North America  
**115% improvement**

Navistar and Volvo: on track to achieve 50% freight efficiency goal

*SuperTruck technologies are already influencing vehicle design*

# Announcing SuperTruck II

---

- DOE EERE Funding Opportunity Announcement
- **\$80M** for up to four cost-shared projects (subject to appropriations)
- Research, develop, and demonstrate class 8 long-haul truck with **greater than 100%** improvement in vehicle **freight efficiency** relative to a 2009 baseline.
- **Engine brake thermal efficiency** greater than or equal to **55%**.
- Cost effective technologies that meet performance demands

# Current Fuels Constrain Engine Design

**RON** viscosity **MON**  
bulk modulus of compressibility Wobbe index cloud point heating value  
**sensitivity** heat of vaporization  
soot precursor formation **PMI** flammability limits smoke point  
**cetane number** **T50**  
heat of combustion flame stretch ignition limits  
**C/H ratio** strain sensitivity  
**density** specific heat ratio

injection timing <sup>direct injection</sup>  
<sup>real time controls</sup>  
EGR ratio number of injections  
injection pressure <sup>charge temperature</sup>  
<sup>on-board reforming</sup> injection duration  
on-board separation <sup>valve overlap</sup>  
turbulence downspeeding

# Tandem Design of Fuels & Engines

## Fuel and Engine Co-Optimization

- What fuel properties maximize ICE engine operations?
- How do engine parameters affect ICE efficiency?
- What fuel and engine combinations are sustainable, affordable, and scalable?

Biofuel blend stocks are promising candidates for improved fuels with reduced GHG emissions

***Additional 15-20% fuel economy improvement possible (50% total vs. 2009)***

# Fuels & Engines Co-Optimization Effort

- FY16 - **\$22M** (\$12M VTO, \$10M BETO) **\$30M** FY17 Request
- Coordinated RD&D across **9 National Laboratories**
- Go beyond what we know about octane and ethanol today

## Thrust 1

spark  
ignition (SI)

2025 commercial entry

Low Reactivity Fuel  
(gasoline)  
high RON

- Octane & beyond
- Downsized, boosted engines, higher CR
- FY16 Q1 -Select 20 fuels
- **FY17 Q2- Go/No Go vs. existing high octane alternatives**

## Thrust 2

Advanced compression ignition (ACI)  
including low temperature, kinetic regimes

2030 commercial entry

High Reactivity Fuel  
(diesel)  
high cetane

Range of Fuel Properties TBD  
(new fuel)  
undetermined fuel needs

- Kinetically controlled
- Low temperature combustion
- Maximize fuel efficiency with very low emissions
- Less known needs
- **Parallel to Thrust 1**

Backward / Forward Compatibility Legacy fleets, Thrust 1, Thrust 2

*High performance, low carbon fuels for high efficiency engines*

# H<sub>2</sub>USA: Public-Private Partnership

## H<sub>2</sub>USA

### Partners

~ 45 Partners in 2015

### Mission

To address hurdles to establishing hydrogen fueling infrastructure, enabling the large scale adoption of fuel cell electric vehicles

### Structure

4 Working Groups coordinated by the Operations Steering Committee

H<sub>2</sub>FIRST  
Coordination  
panel

### H<sub>2</sub>USA's Working Groups

Market Support &  
Acceleration

*More than 45 partners working towards adoption of FCEVs and H<sub>2</sub>*

# Hydrogen – An Energy Carrier and Feedstock

## Diverse Energy Sources

## Diverse Applications

# Transportation as a System (SMART Mobility)

## Today:

- Vehicle level focus
- Independent
- Unconnected
- Subject to behaviors & decisions

## Tomorrow:

- System level focus
- Connected
- Automated
- In concert
- Across modes
- Managed behaviors & decisions

*Exploring the untapped transportation system level efficiencies*

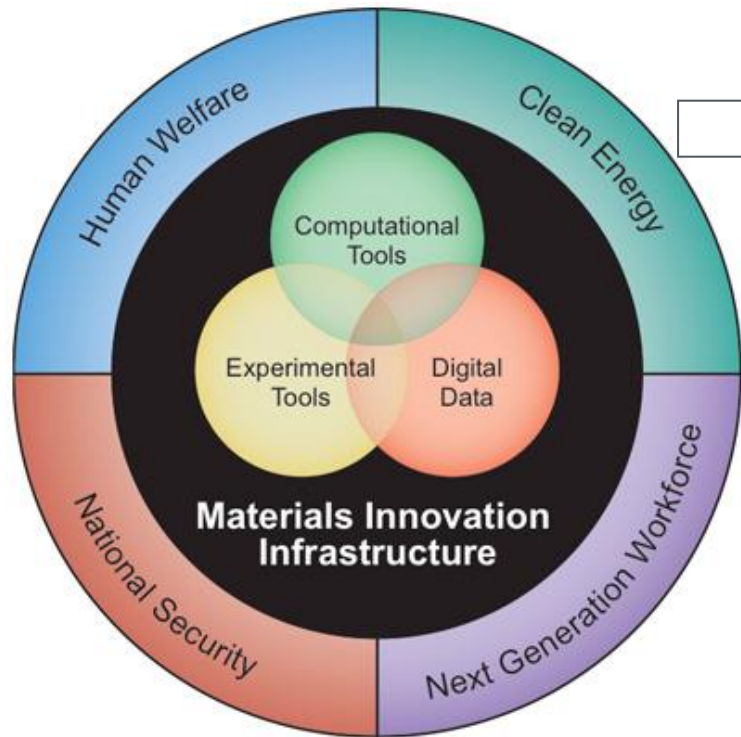

# Connectivity, Automation and Energy

Research by the National Labs

*Vast range of energy implications ... more research required*

# In Support of the Materials Genome Initiative (MGI)

**MGI - Framework**

**Energy Materials Network**

U.S. Department of Energy

*Coordinated resource network with a suite of capabilities for advanced materials R&D*

**Predictive  
Simulation  
Across Scales**

**Synthesis &  
Characterization**

**Rapid  
Screening**

**End Use  
Performance**

**Process  
Scalability**

**Process  
Control**

**Real-time  
Characterization**

**Reliability  
Validation**

**Data Management & Informatics**

**Materials Design  
& Synthesis**

**Functional  
Design**

**Process Scale-Up  
& Qualification**

*New Material Innovations for Clean Energy 2X Faster and 2X Cheaper*

# Network Requirements

1. **WORLD CLASS MATERIALS CAPABILITY NETWORK:** Create and manage a **unique, accessible set of capabilities** within the DOE National Laboratory system
2. **CLEAR POINT OF ENGAGEMENT:** Provide a **single point-of-contact** and concierge to direct interested users (e.g. industry research teams) to the appropriate laboratory capabilities, and to **facilitate efficient access**.
3. **DATA AND TOOL COLLABORATION FRAMEWORK:** **Capture data, tools, and expertise** developed at each node such that they can be **shared and leveraged** throughout the EMN and **in future programs**. Establish data repositories and, where appropriate, distribute data to the scientific community and public. Accelerate learning and development through data analysis using advanced informatics tools.
4. **STREAMLINED ACCESS:** Facilitate **rapid completion of agreements** for external partners, and aggressively pursue approaches to reduce non-technical burden on organizations seeking to leverage the EMN for accelerated materials development and deployment.

# Key Guidance & Principles

- 1. NATIONAL LABORATORY LED CONSORTIA***
- 2. COMMON YET FLEXIBLE CONSORTIUM MODEL***
- 3. CONSISTENCY AND TRANSPARENCY ACROSS EFFORTS***
- 4. ENDURING CAPABILITIES WITHIN THE NETWORK***

# The Energy Materials Network (Fiscal Year 2016)

**Energy Materials Network**

U.S. Department of Energy

**Lightweight  
Materials**

**Lost Cost Mg  
Sheet for  
Auto**

**Chemical Reactions  
& Catalysis**

**PGM-Free  
Catalysts and  
MEAs for Fuel  
Cells**

**Energy Conversion  
Materials**

**Caloric  
Materials**

**Coatings &  
Thin Films**

**Durable  
Materials  
for Solar  
Modules**

# Planned Consortium

Consortia	FY16	FY17
	Low Cost Mg Sheet for Auto	Low Cost Precursors for Carbon Fiber; Mg Corrosion
	PGM-Free Catalysts and MEAs for Fuel Cells	Continue
	Caloric Materials for Efficient Cooling	Continue
	Durable, PV Form Factors	Continue
Fuel Cell - Consortium #5		Materials Based, Low Pressure H2 Storage
Fuel Cell - Consortium #6		Advanced Water Splitting for Renewable Hydrogen
Bioenergy -Consortium #7		Advanced Catalysts for Biofuels

# Budget Snapshot

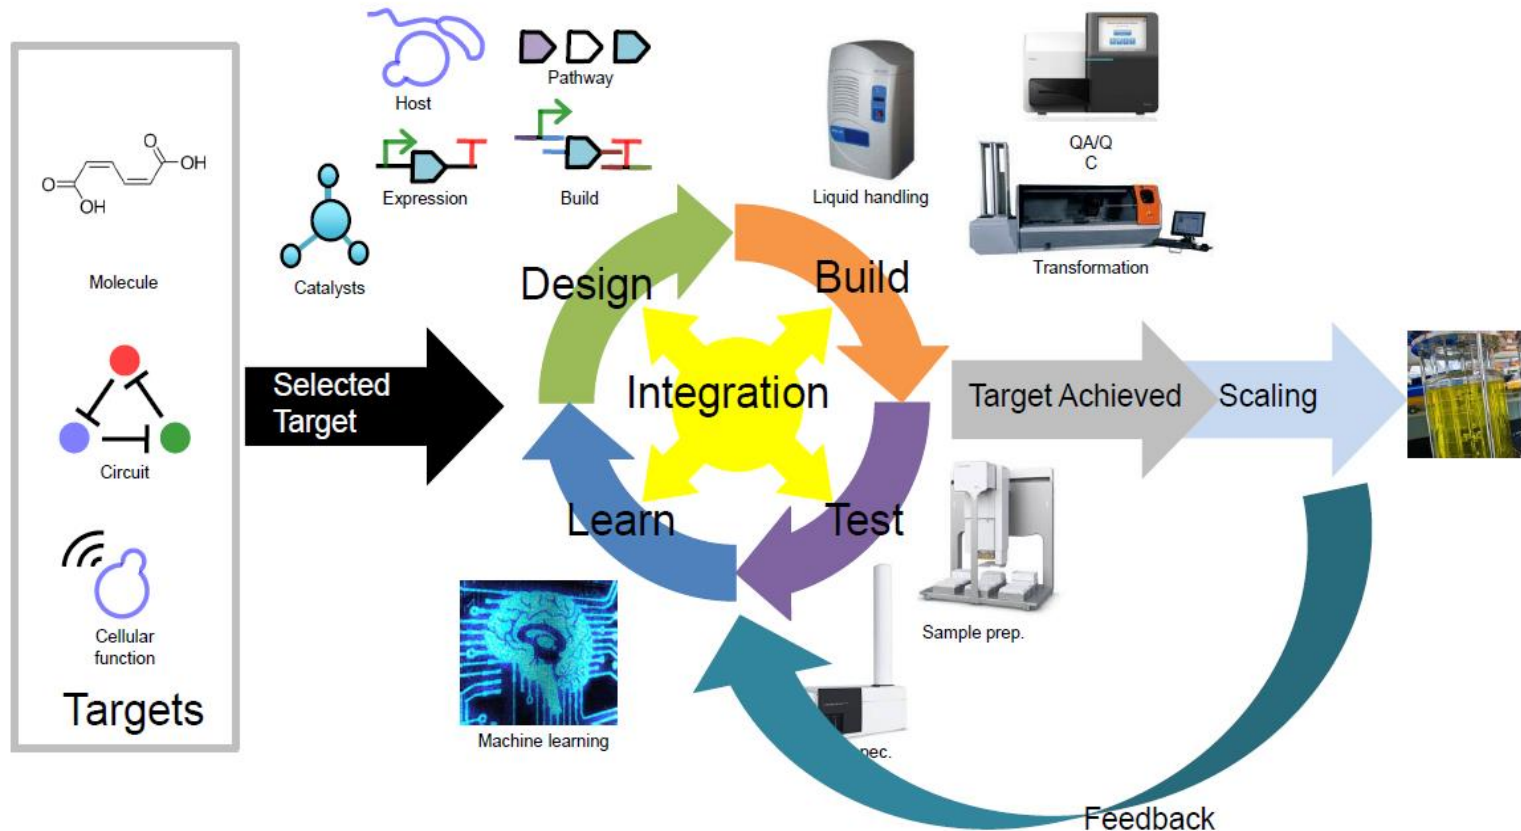

Consortia	FY16 (Enacted)	FY17 (Requested)
	\$12M	\$39.3M
	\$10M	\$10M
	\$8M	\$8M
	\$10M	\$10M
Fuel Cell - Consortium #5	-	\$10M
Fuel Cell - Consortium #6	-	\$14.5M
Bioenergy -Consortium #7	-	\$30M
<b>Total</b>	<b>\$40M</b>	<b>\$121.8M</b>

- **Goal:** Improved catalyst materials to lower the overall cost of biofuels production with lower development costs and lead-times
  - Identifying, synthesizing, and screening new catalysts is a cumbersome and time-intensive process.
  - High through-put screening capabilities, computational modeling, and high-energy particle beam lines
- Catalysis Working Group: a group of five National Labs that are working together to address common catalysis barriers in the thermochemical conversion of biomass to biofuels.
  - ANL, ORNL, NREL, LANL, PNNL
- \$9 M in FY17

# Synthetic Biology (SynBio) Foundry

High-throughput R&D for renewable fuels and products from industrially relevant organisms  
Publically available tools, host strains, and scale-up methods  
Host strains that move beyond E. Coli and yeast

***Suite of capabilities for accelerated R&D + Scale Up of biofuels & bioproducts***

# Potential Impacts of a Billion-Ton Bioeconomy

***1 billion tons of biomass could be sustainably produced in the U.S.***

# Re-envisioning Clean Cities
